

INVISIBLE FRAMING SYSTEM

With its clean, frame-free look, the Invisible Frame is ideal for interior and exterior wall mounted banner applications. And with Formetco's exclusive, Invisible Frame tensioning system, large-format copy can be installed easily and safely. Copy as large as a 14'x48' can be stretched & secured; wrinkle free, around a frame that's kept out of sight. All parts are made of lightweight aluminum and galvanized metal for weather durability and ease of installation. Our frames can be ordered in any size, standard or custom.

- Copy is tensioned behind the frame, as a result all hardware is concealed and gives the illusion of a "floating" copy with a clean tight look
- Copy is finished with pole pockets and can be quickly changed out with a cordless drill
- Simple to install and can be mounted onto a variety of surfaces
- Low profile; frame only sits 3 inches off the mounted surface
- Customizable sizes up to 750 sq. ft., frame pieces come pre-cut to length and with the corners mitered to simplify installation
- Made of lightweight aluminum and galvanized metal for years of outdoor longevity
- Eliminates the use of ratchet straps, grommets, cables, and bungee cords
