

LADDER PROSHIELD

Made out of durable heavy-gauge aluminum which can be painted to blend in with your structure color, being less of an eyesore that doesn't distract from your clients ad-copy. The ProShield is a lockable 8' tall shield cover that allows for authorized fixed ladder access only, while discouraging unauthorized vandals from climbing up your structures. To gain access, climbers would unlock and remove the flexible-shackle padlock and swing open the ProShield door. To prevent the door from accidentally closing while the ladder is in use, our design is the only product to incorporate a swing latch to securely lock it in place. Protect your valuable billboard assets from vandals by calling your Formetco Hardware Sales Representative today!

Features & Benefits

- Discourages unauthorized climbing of fixed access ladders while reducing owner liability
- Angled sides deter reaching around the ProShield to access ladder rungs
- Eight foot height helps prevent bypassing the cover
- Can be installed to swing open from the left or right side rails completely out of the climbers way
- Swing latch keeps door locked in open position
- Galvanized bolt-on brackets for quick and simple installation
- Helps prevent vandals from destroying expensive property

Applications

- Static and Digital Billboard Structures
- Digital Scoreboard Structures
- Amusement Parks
- Water Towers
- Rooftop Access Ladders
- Warehouse and manufacturing facilities with fixed access ladders
- Schools, colleges, and universities with ladder safety programs
